The suggested main readers for Prof. Mathewmatician's publications

Prof. Mathewmatician 著作主要提供的读者参考建议

Regarding the author's work, "Primary Mathematics Book", the following evaluations have been given by myself, parents I know, teachers, and students who have read it.

Me: With years of experience in education, this book is the first comprehensive collection of all elementary mathematics knowledge. The layout is rigorous yet easy to read and understand, and every elementary student should have a copy.

Teachers: The Chinese-English bilingual edition is beneficial for students to learn mathematics in English in middle school. The book also contains some practical innovative teaching methods that can help us teachers grow.

Parents: It is light and portable, children can take it with them to read at any time, and I will also read it to find out if I have forgotten the knowledge learned many years ago. In addition, this book is different from ordinary exercise books in that you cannot reuse it after you finish it. This book has the function of a reference book. It can be used by the whole family and is economical.

Students: The examples are simple and easy to understand, it's okay to learn in advance, and you can look back at the knowledge you have learned but forgotten.

In addition, regarding the author's future publication of the extended work, "Foundation (Preschool, Primary & Middle School) Mathematics Book", I support it absolutely. This can extend elementary mathematics to the middle school level, benefiting more students. Furthermore, I believe that the new parts will continue the high quality of the original work.

The above is written by me after integrating the opinions of many teachers, parents and students. Sincere thanks to Dr. Yip, Matthew Siu Ting for his contributions.

Best regards
